ERRATA

In the abstract of the paper by INNES on leprosy in Tanganyika, this *Bulletin*, 1950, v. 47, 365–6, the figures of incidence given in lines 3 and 5 and 13 and 15 of abstract are per thousand of population and not per cent. as stated.

In the abstract of the paper by GAASE on immunization against trichiniasis, this *Bulletin*, 1950, v. 47, 559, the experiments with guineapigs are not correctly reported. The 3 guineapigs received the infective feed *after* having received the three injections of *Trichinella* antigen. The 5 guineapigs received the infective feed *before* receiving the three injections of antigen.

The numbers of larvae recovered from the 3 guineapigs which received infection *after* antigen were smaller than the numbers recovered from the 5 which received infection *before* antigen.

In the abstract of the paper by CALVÓ FONSECA on rabies in Cuba, this *Bulletin*, 1950, v. 47, 620, for ferrets read " the mongoose (*Mungos birmanicus*) ".

In the paper by MACDONALD on " The Analysis of Malaria Parasite Rates in Infants ", this *Bulletin*, 1950, v. 47, 915–38, the following reference should be added to the list of references on p. 937.

DAVEY, T. H. & GORDON, R. M. (1933) *Ann. Trop. Med. & Parasit.*, v. 27, 27. [*Trop. Dis. Bull.*, 1933, v. 30, 466.]

In the abstract of the paper by PINTO on urinary schistosomiasis in Portuguese Guinea, this *Bulletin*, 1950, v. 47, 1004–5, the statement that the total number examined was 403 should have referred only to one group of infants. The 502 referred to in the square bracket comment formed a separate group. The numbers examined and reported on in relation to age and sex should read 69 and 100 instead of 20 and 31; the latter figures are of infants only. The snail *Pyrgophysa* (*Bulinus*) *forskali*, described as the vector, was found to be attractive to cercariae of *S. haematobium*, but was not found infected by furcocercariae in nature. It is only an assumption, therefore, that it is the intermediate host.
